UGANDA HEART INSTITUTE

FINDINGS:

Right heart catheterization:

RA pressure (mmHg):6/4/2 PA pressure (mmHg: 23/6; 11

RV pressure (mmHg) : 23/3;5 PCW pressure (mmHg): 7/6; 4

FA sat: 95% RA sat: 66.5% PA sat: 69.4% HB:16.3mg/dl

CO: 4.27l/min CI: 2.37

Coronary arteries:
LMCA is normal
LAD is type II vessel and gives rise to diagonals. There is an 80% mid LAD stenosis. LAD collaterizes the distal to mid RCA.
LCx is non- dominant vessel and gives rise to obtuse marginal branches. There are mild luminal irregularities.
RCA is a dominant vessel which has a chronic sub-total occlusion proximally. The PDA and PLV are collaterized from the LAD.
LV angiography not done, but LV function by Echocardiography is normal.

Left heart pressures: PRE AORTA (S/D/M): 128/110/108, LVEDP: 12mmHg

IMPRESSION:
1. Double vessel CAD with 80% stenosis in mid LAD and subtotal occlusion of the proximal RCA.
2. Normal biventricular filling pressures.

RECOMMENDATION: PCI vs CABG: Discussion will be held with primary care Cardiologist about the options of treatment. Anti-anginal therapy recommended in the meantime.

DR NYAKOOJO.B WILSON
SENIOR CONSULTANT CARDIOLOGIST.
